DEAR EDITOR,

Type 2 diabetes mellitus (T2DM) is a major global public health problem in the world-wide and is increasing in aging populations.^[1-3] We previously conducted a study entitled; lipids in association with serum magnesium in DM patients in 2008. In this study, on 122 patients, we found a significant inverse correlations of serum magnesium with serum cholesterol and low-density lipoprotein cholesterol (LDL-C).^[4] In this regard, we would like to remind a few points about the association of magnesium with serum lipids in T2DM. In the study conducted by Dasgupta *et al.* on 150, T2DM patients, hypomagnesemia was documented in 17 (11.33%) of patients. They concluded that hypomagnesemia in diabetes was associated with poorer glycemic control, retinopathy, nephropathy and foot ulcers.^[5] Baig *et al.* conducted a study on 60 patients of T2DM between 40 and 70 years. They observed that the mean serum magnesium level was statistically significantly low in diabetic patients without and with complications when compared with controls. Furthermore, they found that serum magnesium level in cases with diabetic complications was much lower than those without complications.^[6] Recently, Kocot *et al.* conducted a study on 54 T2DM and found, low concentration of magnesium in diabetic people in comparison to healthy individuals. They also found, a weak negative correlation between

plasma magnesium and total cholesterol as well as between plasma magnesium and triglycerides in diabetic patients.^[7] This finding was in agreement with our previous results.^[4] More recently Mishra *et al.* studied 45 known diabetic patients, observed significant negative relation of serum magnesium with triglyceride and very-LDL-C level and positive relation of magnesium with serum high-density lipoprotein cholesterol (HDL-C) too.^[8] The association of hypomagnesemia and insulin resistance in diabetes patients has been documented previously. Accordingly in the study of 219 diabetic patients, Rasheed *et al.* found serum magnesium had significantly positive correlation with HDL-C while total cholesterol and LDL-C was negatively correlated, albeit non-significantly, with serum magnesium.^[9] Furthermore, a study on 550 T2DM patients, revealed serum magnesium, significant negative correlation with estimated glomerular filtration rate.^[10] Thus, clinical care should therefore focus on increasing dietary magnesium intake or magnesium supplementation to improve metabolic control and prevent dyslipidemia in diabetes patients.

INTERNATIONAL JOURNAL OF PREVENTIVE MEDICINE on Web

<http://www.journalonweb.com/ijpvm>

International Journal of Preventive Medicine now accepts articles electronically. It is easy, convenient and fast. Check following steps:

1 Registration

- Register from <http://www.journalonweb.com/ijpvm> as a new author (Signup as author)
- Two-step self-explanatory process

2 New article submission

- Prepare your files (Article file, First page file and Images, if any)
- Login into your area
- Click on 'Submit a new article' under 'New Article'
- Follow the steps (three steps for article without images and five for with images)
- On successful submission you will receive an acknowledgement quoting the manuscript numbers

3 Tracking the progress

- Click on 'In Review Article' under 'Submitted Articles'
- The table gives status of the article and its due date to move to next phase
- More details can be obtained by clicking on the Manuscript ID
- Comments sent by the editor and referee will be available from these pages

4 Submitting a revised article

- Click on 'Article for Revision' under 'Submitted Articles'
- Click on 'Revise'
- From the first window, you can modify Article Title, Article Type
- First Page file and Images could be modified from second and third window, respectively
- The fourth step is uploading the revised article file.
- Include the referees' comments along with the point to point clarifications at the beginning of the revised article file.
- Do not include authors' name in the article file.
- Upload the revised article file against New Article File - Browse, choose your file and then click "Upload" OR Click "Finish"
- On completion of revision process you will be able to check the latest file uploaded from Article Cycle (In Review Articles-> Click on manuscript id -> Latest file will have a number with 'R')

Facilities

- Submission of new articles with images
- Submission of revised articles
- Checking of proofs
- Track the progress of article in review process

Advantages

- Any-time, any-where access
- Faster review
- Cost saving on postage
- No need for hard-copy submission (except on acceptance images should be sent)
- Ability to track the progress
- Ease of contacting the journal

Requirements for usage

- Computer and internet connection
- Web-browser (preferably newer versions - IE 5.0 or NS 4.7 and above)
- Cookies and javascript to be enabled in web-browser

Online submission checklist

- First Page File (text/rtf/doc/pdf file) with title page, covering letter, acknowledgement, etc.
- Article File (text/rtf/doc/pdf file) - text of the article, beginning from Title, Abstract till References (including tables). File size limit 1MB. Do not include images in this file.
- Images (tiff): Submit good quality colour images. Each image should be less than 4096 kb (4 MB) in size

Help

- Check Frequently Asked Questions (FAQs) on the site
- In case of any difficulty contact the editor
